Don:

I think we need to look at the vinyl composite fencing. I want something with longevity and maintenance free. I don't want something that they are going to have to stain every year to keep it up. It needs to be commercial grade as well. Have them bring out some samples of the vinyl composite for us to take a look at. I would like it to be 6 feet tall and have a stained cedar texture and color if possible. What do we know about getting the property boundaries. I would like it to run from the back corner of the shed by the alley to the south corner of DRA06/DRA07 (basically the redline between the site (FJD04) and the (b) (6) property (FJD03) on the attached map.

Can the fencing company determine the property line? Or do we need to get a surveyor?

The bufftech fence comes from Viking so you may want to contact them. I also think they have a office in McKinney.

Thanks
 Gary Moore

Subject: Fence Solicitation

All:

We had secured preliminary pricing for 200' of 6' tall stockade fence composed of vinyl. The vendor we solicited has subsequently failed to return calls/emails for the past 2 weeks. I asked Angela to resume a search for a fence contractor that could do the job.

In the course of her calls, she was told by one of companies she talked to (Green & Son Contracting) that the best fence for durability and longevity would be cedar, rather than the vinyl. He stated that a cedar fence would be an insect deterrent as well. He told Angela that the vinyl would degrade quickly in sun/heat and becomes brittle quite soon, within 5 to 10 years.

He will quote us cedar and composite fencing. He will provide us a quote this afternoon. The

composite will be more expensive but it would carry a longer warranty.

We'll keep everyone posted on our progress.

Don
